Project TRUST

From Compliance to Confidence: Designing a Trust
Experience Layer for Vedantu's Learning Journey

Product Management Intern Case Study · Janaswami Harshith Kumar

Observe

Understand

Prioritize

Design

Measure

Vedantu isn't one product — it's a live, multi-sided trust ecosystem

Personalization is the product's core value proposition — and personalization runs on educational data.

Students

Attend live classes, generate quiz & attendance data that fuels adaptive learning.

Parents

See academic progress, but limited context on how their child's data drives it.

Teachers

Create the recordings & analytics that power the ecosystem — with little visibility back.

Learning Data

AI Personalization

Better Outcomes

Parent Confidence

Retention & Trust

More learning data → better personalization. Privacy can't simply restrict collection — it must build confidence in it.

This isn't a compliance gap. It's an experience gap.

What already exists

- Privacy Policy & Child Safety Policy
- Parent consent framework
- Secure infrastructure
- Live classroom moderation
- Responsible learning analytics

Strong. Mature. DPDP-aligned.

What users actually experience

- “Why does it need my camera?”
- “Why this recommendation?”
- “Is this class recorded?”
- “Can I control my data later?”
- No answer, in the moment it's asked

Invisible. Undiscovered. Unexplained.

Users are protected. They rarely feel protected — and that gap is a product opportunity.

Why confident users still feel uncertain

Root Cause (5 Whys): Privacy is treated as legal documentation instead of an integrated product experience.

Real questions users can't confidently answer today:

Key insight: users rarely question responsible products. They question unclear ones.

What I deliberately chose not to build

A Product Manager solves one meaningful problem well — not ten small ones.

Redesign onboarding consent

Onboarding is already optimized for speed; more steps hurt conversion.

Rejected

Standalone Privacy Dashboard

Settings pages are rarely visited; trust needs to live in the journey.

Rejected

Rewrite the Privacy Policy

Already serves its legal purpose; doesn't move user experience.

Rejected

Progressive Transparency across existing journeys

Builds trust at meaningful moments without adding friction.

Selected

Introducing the Vedantu Trust Layer

An invisible experience layer across existing journeys — not a new app, not a new nav.

Smart Consent

Contextual permission requests, in plain language, only when relevant.

Just-in-Time Disclosure

Explains data use exactly when it becomes relevant — nothing more.

Progressive Transparency

Small, consistent moments of clarity built into everyday interactions.

TRUST LAYER · Smart Consent · JIT Disclosure · Progressive Transparency · My Learning Data

Existing Vedantu Features · Live Classes · Assignments · AI Recommendations · Parent Dashboard

Small moments. Built-in confidence. Zero extra screens.

Joining a Live Class

BEFORE

Allow Camera

ENHANCED

“Camera helps your teacher see & interact with you.” [Allow] [Learn More]

AI Recommendation

BEFORE

(no explanation shown)

ENHANCED

“Recommended from your recent quiz performance.” [Manage →]

Parent Reviewing Progress

BEFORE

“How are these generated?”

ENHANCED

Insights based on Attendance, Assignments, Quiz Scores. [Learn More]

Every trust interaction answers a user's question in under 5 seconds — without a single new screen or extra tap.

Design rule: if a feature creates more friction than confidence, it doesn't get built.

Measuring confidence, not compliance

North Star Metric

Learning Trust Completion Rate

% of users who complete contextual trust interactions without abandoning their learning journey

65% → 85%

baseline → 3-month goal

Guardrails

- Onboarding completion — unchanged
- Join-class time — < 2 sec increase
- AI recommendation usage — no drop
- Privacy support tickets — should fall

Trade-offs

Accepted

Slight interface & engineering effort → higher long-term confidence

Rejected

Long onboarding, mandatory tutorials, repeated consent, a standalone privacy app

NOTE : THE PROTOTYPE SCOPE IS STUDENT FIRST ,CONCENTRATING ON THE CORE CONSUMER OF VEDANTU.

Safe to A/B test: wording, illustrations, placement, microcopy. **Never experimented on:** legal consent, parent consent, or child-safety disclosures.

Earn trust gradually — never launch it all at once

Observe → Learn → Improve → Expand

What's next

Project TRUST is not a privacy redesign. It's a trust redesign.

Vedantu doesn't need users to simply trust it through policies — it can earn that trust through thoughtful, contextual product experiences.
